#### Description

First reported in the User forum, here: <https://groups.google.com/d/msg/ica-atom-users/KTfkg4D43NE/o38k1XF3AwAJ>

Interestingly, I could only reproduce this in IE (I was using 11). In other browsers (FF, Chrome), the Actor tooltips appear inline below the relevant field, instead of in the left margin.

See screenshots for details.

- Description updated

Actually - I think the repositioning is just part of the responsiveness. When the width is wide enough, the tooltips appear in the sidebar for all browsers - but the overflow problem is not an issue in Firefox. The user in the forum suggested the following:

(no rendering issues with FF. add word-wrap?)
