#### Description

The problem seems to happen when all the events related to the actor are loaded in the edit template:

[https://github.com/artefactual/atom/blob/qa%2F2.6.x/plugins/sflsaarPlugin/modules/sflsaarPlugin/templates/\\_event.php#L26-L38](https://github.com/artefactual/atom/blob/qa%2F2.6.x/plugins/sflsaarPlugin/modules/sflsaarPlugin/templates/_event.php#L26-L38)

We should consider moving this to a different page with pagination or remove it altogether and only allow to edit the event from the related archival description page.

#### History

- Status changed from New to Code Review

I've added AJAX paging to events on the actor edit page.

In order to do so I made a slight modification to js/multiDelete.js so logic in it can be ran both on page load and when new rows are dynamically added via AJAX (otherwise a delete icon will get added more than once to a row).

I moved JS out of the PHP template file, as well, to make things cleaner.

PR for CR: <https://github.com/artefactual/atom/pull/985>
