When an EAD file includes a description that has multiple <unittitle> tags, import takes only the last tag and sets as title.

Maybe I'm not understanding the issue, but here is how I tested it using RAD template and EAD XML Export/ Import.

Step One: Create fonds with Proper Title, Parallel Title and Other Title.

Step Two: Export EAD XML

Step Three: Review EAD

```
<archdesc level="fonds" relatedencoding="ISADv2">
<did>
<unittitle encodinganalog="3.1.2">This is Title Proper</unittitle>
<unittitle type="parallel">This is Parallel Title</unittitle>
<unittitle type="otherinfo">This is Other title</unittitle>
```

Step Four: Import EAD

Step Five: Review AtoM description. All titles are in correct order.
