**Description**

In 1.3 the default treeview is to show the fonds closed. The user must select the > to open lower levels. Inexperienced users will not know that lower levels exist.

Is this a performance issue?

It would be better to show the treeview with the fonds open to reveal lower levels.

#### History

##### #1 - 08/14/2012 09:00 PM - Jesús García Crespo

- Target version changed from Release 1.3 to Release 2.1.0

I understand what you mean. However, it would be too much work for this deadline. We can try to fix that for 2.0, anyways the treeview will require other changes for 2.0.

Now the fonds is open and shows the immediate child levels. But these child levels are closed.

E.g.

Fonds - Title

Series A - Title

Series B - Title

If you open Series A, you get:

Fonds - Title

Series A- Title

File A - Title

But you no-longer see Series B.

If you open Series B, you get:

Fonds - Title

Series B- Title

File B - Title

Unfortunately, you can't see all the higher levels once you open a lower level:

E.g.,

Fonds - Title

Series A - Title

Series B - Title

File B - Title

And you also don't see all the child levels open when you arrive.
